

JAKOB HATTELAND DISPLAY / OPTICAL TECHNOLOGY PLANT 2

Plant 2 will be used to carry out the optical bonding process introduced by JHD to its marine monitors, providing several benefits including almost perfect sunlight viewing and the elimination of condensation.

An extremely clean environment is required when working with TFT screens as dust and dirt particles can cause the screen image to become distorted. To this end, we have implemented two cleanroom classes to ensure processes can be conducted in the clean environments required, resulting in highly reliable operation of all of our marine displays.

Plant 2 will also be used for developing and implementing new processes and optical technologies, currently in development by Hatteland Technology. JHD is renowned for providing solutions to overcome the environmental challenges faced by marine monitors and Plant 2 will vastly increase the capacity of both JHD and Hatteland Technology to develop new optical technologies.

JHD has appointed Joseph Sanelle as Technical Director in charge of Plant 2.

A few facts about Plant 2:

Plant 2 Building

Size: Almost 500m²

Location: Nedre Vats, Norway on the Jakob Hatteland campus.

Plant 2 Cleanroom

Size: 200m², Class 1000

Capacity

Minimum: 5000 units pr. year,
based on average size 19 inch.

Size Handling

2.5 inch up to 46+ inch

Ends.

--- About Jakob Hatteland Display ---

Jakob Hatteland Display manufactures high quality marine monitors and computers. It is part of The Hatteland Group, which was founded by Jakob Hatteland in 1971. Based in Nedre Vats, Close to Haugesund on the West coast of Norway, the Hatteland Group has offices and agents around the world. Its products are used by system integrators and can be found on all vessel types, all over the world. The company prides itself on quality, and boasts multiple Type Approvals across all of its products.
