

HATTELAND[®] DISPLAY

Sea-Air-Space Exposition, Washington DC, May 3-5, 2010. Booth #1200

World's First 23" LED Backlight Display

The LED backlighting ensures that the new 23" Series 1 display provides excellent viewing performance.

It is a perfect match for Hatteland Display's proprietary optical bonding technology, which enhances the optical performance of the display in particular in bright ambient environments, eliminates condensation and improves thermal management. The LED backlight ensures excellent image quality, more reliable operation and a long product lifespan.

The new 23" Series 1 display with LED backlighting is built to the highest standards, and has undergone a strict extended testing process, to ensure reliability in the tough marine environment. This new product is an important part in Hatteland Display's long term Form - Fit - Function program. It is planned to be available for at least the next 4-5 years, which makes it perfect for both retrofit and newbuild projects.

It has been tested and has successfully passed ECDIS color calibration. "We have re-developed our popular 23.1" marine monitor with LED backlight and multipower. Hatteland Display has specified and developed the liquid crystal display module (LCD) together with our long term technology partner SHARP, Japan. This cooperation and joint effort will be beneficial for the marine market for many years to come. It is evidence of our long term business idea, making life simpler for our customers!", says VP Sales & Marketing Lars Skjelbred-Eriksen.

To find out more about the new 23" Series 1 display with LED backlighting and Hatteland Display's extensive range of marine displays and computers, visit www.hatteland-display.com.

Ends.

About Hatteland Display

Hatteland Display is the leading technology provider of specialized display and computer products, delivering high quality, unique and customized solutions to the international maritime and industrial markets.

The company represents innovation and quality to the system integrators world wide. Effective quality assurance and investment in sophisticated in-house manufacturing methods and facilities enable us to deliver Type Approved and Mil tested products.

Our customer oriented approach, technical knowledge and dedication to R&D, makes us a trusted and preferred supplier of approved solutions, which are backed up by a strong service network.
